# STANDARD SPECIFICATIONS

Warranty	All generating sets are covered under warranty policy for a period of 12 months in line with the manufacturers' warranty policy			
Quality Standards	The equipment meets the following standards: BS4999, BS5514, IEC 60034, VDE0530, NEMA MG 1.22 and ISO 8528			
Engine Filtration System	Air filter, Fuel filter, Oil filter. All filters have replaceable elements			
Fuel System  Cooling Radiator	On generating sets up to 650KVA, the base frame design is incorporated with an integral fuel tank with a capacity of approx 8 hours running at average load. The tank is supplied with fill cap breather, fuel feed and return pipes to the engine and drain plug  Radiator and cooling fan, complete with safety guards, designed to cool the engines at high ambient temperatures		Base Frame: The complete generating set is mounted as a whole in a heavy duty fabricated steel base frame.  Coupling: The engine and alternator are directly coupled by means of an SAE flange. The engine flywheel is flexibly coupled to the alternator rotor  Anti-Vibration Mounting Pads: Anti-vibration pads are affixed between the engine/alternator feet and the base frame thus ensuring	
Exhaust System	Heavy duty industrial exhaust silencer Silencer noise reduction level: 22 (dB) Maximum allowable back pressure: 10 (kPa)		complete vibration isolation of the rotating assembly  Safety Guards:  The fan & fan drive along with the battery charging alternator are safety guard protected for personnel protection	
Documentation	Operation & Maintenance manual, circuit wiring diagrams and commissioning / fault finding instruction leaflets are accompanied with the generator	Factory Tests:  Equipment Finishing:	The generating set is load tested before dispatch.  All protective devices control functions and site load conditions are simulated. The generator and its systems are checked before dispatch  All mild steel components are fully degreased and painted with powder coated paint to ensure maximum scuff resistance and durability
